Feynman Path Integral in Solid State Physics
Blatt 6
Fermi Coherent States-II

1) Show that for Grassmann variable we can calculate the following integral

$$\int \Pi_{k \neq 1}^N dc_k^* dc_k e^{\sum_{i,j=1}^N c_i^* M_{ij} dc_j} = \det M'_{11} - c_1^* c_1 \det M$$

where M'_{11} is $(1, 1)$ minor of matrix M

2) Prove the formula for discrete Hubbard-Statonovich-Hirsch transformation

$$e^{-U[n_\uparrow n_\downarrow - (n_\uparrow + n_\downarrow)/2]} = \frac{1}{2} \sum_{s=\pm 1} e^{\lambda s(n_\uparrow - n_\downarrow)}$$

where

$$\lambda = \arccos h(e^{U/2})$$
